PERSONAL PROJECTS

Project -Aashray

- Aashray is an innovative application, addresses the persistent problem of homelessness in India through a combination of technology and compassion. The app enables user to report encounters with homeless individuals easily by capturing and sharing photo within the app or website. This valuable information includes precise location details, is quickly relayed to nearby NGOs, allowing them to respond promptly and offer the necessary support.

Hotel Management Website

- A hotel management system is a software solution designed to streamline and automate the operations of a hotel or hospitality business. It typically includes modules for managing reservations, room inventory, guest check-ins and check-outs, billing and invoicing, housekeeping, and reporting. These systems help hoteliers efficiently manage their properties, improve guest experiences, and optimize revenue by providing tools for better organization, communication, and data analysis.

Ai-Video Translator

- An AI video translator is a cutting-edge technology that uses artificial intelligence algorithms to automatically translate spoken or written content in videos from one language to another. These systems can analyze audio tracks, subtitles, or on-screen text, and then generate accurate translations in real-time or post-production. They enable global audiences to access video content in their preferred language, breaking down language barriers and facilitating cross-cultural communication and understanding.
